

Supporting Table 7 Timeliness of care: elapsed time between arrival at hospital and arrival in theatre for non-elective patients with recorded markers of intra-abdominal sepsis

Timeliness measured in hours.

	Sepsis suspected at time of arrival (n=5,061)	Sepsis suspected at time of decision to operate (n=6,174)	Predicted gross peritoneal soiling (n=5,694)	Percentage Sepsis suspected at time of arrival in hospital and ≤ 6 hrs to theatre (from arrival in hospital)	Percentage Sepsis suspected at decision to operate and ≤ 6 hrs to theatre (from decision to operate)
Time from arrival at hospital until arrival in theatre (median [IQR])	15.5 [7.8–50.8]	17.5 [8.5–60.2]	14.5 [8–46.9]	14.96%	79.23%

Note: timeliness data in this table includes patients with completed time and date fields only.
