

## Supporting Table 8 Timeliness of care: antibiotic administration in emergency patients with suspected sepsis

Timeliness measured in hours.

	Number	Median [IQR] time from hospital arrival until first antibiotic administration (hours)	Proportion who received antibiotics within one hour of arrival to hospital
Suspected sepsis on arrival	3,688	3.1 [1.3625–6.54]	20.4%
Suspected sepsis at decision to operate	4,533	4 [1.75–9]	16.6%
Predicted peritoneal soiling	4,089	4.3 [2–8.63]	14.7%

Note: timeliness data in this table includes patients with completed time and date fields only.
